

DURASCREW

Duravey Bulk Handling offers an innovative solution for accurate and spillage free material transportation with our DURASCREW conveyor system. The system makes use of a rotating helical screw blade, also known as a flight, fabricated within a tube. The flight circular movement conveys either milled materials or liquid within a sealed environment.

DURASCREW is utilized in a horizontal or slight inclined application to convey numerous materials such as semi-solid minerals, aggregates, grains, ash, feeds, fertilizer or municipal waste. The system design can offer different solutions being mixing, flushing, blending or stirring. The system is driven at one end with the discharge at the other and is often used as an accurate process feeder. The system also comprises of a variable speed option for controlled quantities.

The DURASCREW is surely a cost effective solution for material conveying especially in confined applications. Our product range also includes dosing mixers, classifiers and steep inclined conveyors.

We cater for all segments of the conveying industry being it industrial, mining, agricultural and packaging we have the solution at your disposal.
